Lead Sheet: A Traditional Material

Lead sheet has been used in the construction industry for centuries. Indeed because no other material offers the weather resistance, ease of handling or unprecedented recyclability of lead.

The Innovation

VENUSBLEI combines these advantages with a special surface finish. Its distinctive appearance is characterised by its uniform colouring which withstands the ravages of time and weather. In addition, the innovative finish prevents the occurrence of basic lead carbonate. What remains is the typical lead surface with its metallic sheen.

Benefits For Craftsman

VENUSBLEI offers great advantages for craftsman. The surface-finished material can be laid in all weather conditions because even in humid circumstances, no formation of carbonate is to be feared. Elaborate patinating of the sheets is not necessary – and that saves time and money.

Eco Friendliness

Lead is considered one of the most environmentally compatible materials in the construction field. Today, lead sheet is already produced for the roofing sector out of almost 100 % recycled material - and that with the lowest energy expenditure in the field of building products. With the eco friendly finish, this also applies without any reservations to VENUSBLEI.

Laying

VENUSBLEI is laid according to the guidelines issued by the National Roofing Associations. To protect the surface finish, no adhesive tapes containing solvent should be used when laying VENUSBLEI and VENUSBLEI-SK.

VENUSBLEI Corrugated

As flashing for roof-lights and dormers as well as solar and photovoltaic systems, VENUSBLEI is also available in corrugated form.

VENUSBLEI-SK

VENUSBLEI-SK, the full-surface self-adhesive lead sheet for all junctions and joints that suits all roofing materials in the area of pitched and flat roofs.

VENUSBLEI For Roof And Facade

Alongside the standard dimensions, if required, we can also offer special sizes up to a thickness of 2.5 mm.

VENUSBLEI in use: "The Jülicher Citadel"

Service

Röhr + Stolberg is an experienced provider of lead products with thorough sectoral knowledge and state-of-the art production facilities. Our aspiration is to offer our customers benefits on an individual basis, also in the area of service and consultation. We therefore regularly arrange training courses, sessions and we support our customers personally by providing specific advice in application.
