

flexCOLOR-Pb

The fully self-adhesive
metal sheeting with
the unique surface structure

ISO TS 16949 for
the production
for battery terminals
of lead batteries

flexCOLOR-Pb – durable and highly flexible

Product composition

- 1 Protective sheet
- 2 Adhesive
- 3 Lead sheet
- 4 Surfaces

Standard Dimensions

Width	Length	Weight
150 mm	5.000 mm	3,15 kg
300 mm	5.000 mm	6,3 kg

Colour Tones

-  **Brick red**
similar to RAL 8004
-  **Brown**
similar to RAL 8019
-  **Black**
similar to RAL 9005

Additional colours
on request

Rolled lead: a traditional material

Rolled lead has been employed as a building material for centuries. And for good reason, because no other material offers the same weather resistance, easy application and unmatched recyclability of lead.

Flexible, easy, quick

flexCOLOR-Pb is metal sheeting, self-adhesive across the entire surface, offering high flexibility. Owing to this, it is not only eminently suited to all transition areas on roofs, such as dormers, flues, wall connections, loft windows, batten cap cladding, and flashing in roof penetrations but also for use on flat roofs. Weak points around roof penetrations, for example at flues or dormers, can be sealed tightly, reliably, and permanently with flexCOLOR-Pb. The product excels because of its UV resistance, long service life of the metal, as well as its weather-resistant coatings.

Advantages

flexCOLOR-Pb makes laying a much easier job because of its special characteristics. Its long-lasting, butyl-based adhesive layer over the complete surface is universally applicable and saves time, due to its quick and easy application. flexCOLOR-Pb's high malleability makes it a versatile material. The metal's unique surface structure combined with flexible jointing tape which is ductile in three dimensions ensures professional production of details even when using special techniques for joints and seams. Thanks to its ease of use and low weight, flexCOLOR-Pb provides a clean, simple and lasting solution even for places that are difficult to access.

Environment

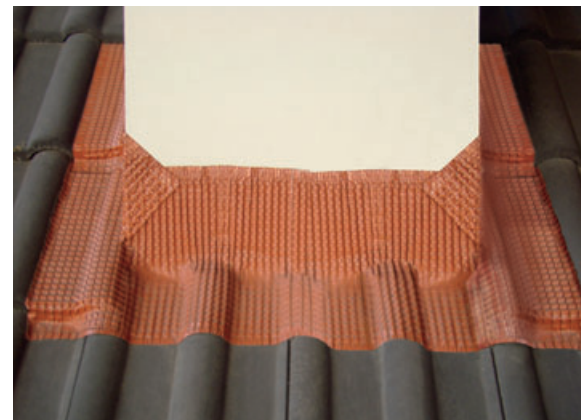

Lead is considered to be one of the most eco-friendly materials in the building industry. Nowadays, rolled lead for roofing work is manufactured almost 100% from recycled material and what's more, with the lowest energy consumption across the whole field of building products.

Laying

When applying flexCOLOR-Pb, we recommend following the laying instructions on our website: www.roehr-stolberg.de.

Service

Röhr + Stolberg is an experienced supplier of lead products, very knowledgeable in the sector and with the most modern production facilities. It is our aim to give our customers added value when it comes to individual service and guidance. Consequently we regularly organise courses of instruction and training and are ready to give our customers personal attention and advice on application techniques.
