

bleiCOLOR

Colour-coated lead sheet for roofs and façades.

bleiCOLOR

Uniform long-term colouring

All-rounder for roofs and façades

Lead sheet is one of the most traditional materials used for roofs and façades. Extremely durable, one hundred percent recyclable and offering outstanding cold-forming properties, it has been the material of choice for sustainable construction for centuries.

Durable and attractive

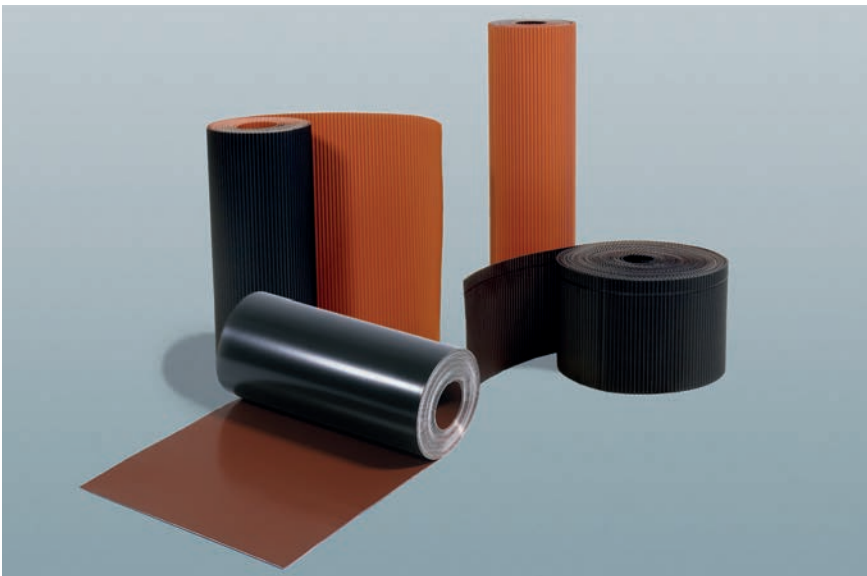

bleiCOLOR combines all the advantages of classic lead sheet with an attractive, permanently uniform colour coating. The coating blends in superbly with the aesthetic appearance of the building. It is environmentally compatible and extremely UV- and weather-resistant. bleiCOLOR permits the creation of flashings and surfaces that have a superior visual appearance as well as a service life that is unsurpassed.

Benefits for craftsmen

bleiCOLOR can be laid easily in any weather. Because the coating prevents the formation of white streaks, there is no requirement for time-consuming patination or painting following fitting. Like all lead sheet products, bleiCOLOR can also be cut and worked flexibly in situ. It comes in two colours, so that it can be laid on either side.

Versatile in use

bleiCOLOR is suitable for sealing roofs and façades and can also be laid on large surfaces. It is processed in the same manner as untreated lead sheet and can be subjected to all forming techniques as well as soldering and welding.

STANDARD DIMENSIONS

Rolls of approx. 50 kg

1.25 x 1,000 x 3,500 mm

Rolls of approx. 25 kg

1.25 x 150 x 12,000 mm

1.25 x 250 x 7,000 mm

1.25 x 330 x 5,000 mm

1.25 x 450 x 4,000 mm
