### DRY RIDGE VENT ROLL

Colour-coated lead sheet for sealing ridge and hip tiles.

# bleiCOLOR DRY RIDGE VENT ROLL

## Long-lasting ridge and hip tile sealing

### All-rounder for roofs and façades.

Lead sheet is one of the most traditional materials used for roofs and façades. Extremely durable, one hundred percent recyclable and offering outstanding cold-forming properties, it has been the material of choice for sustainable construction for centuries.

### Specialist for ridge and hip tiles

bleiCOLOR Dry Ridge Vent Roll was specially developed for sealing all typical ridge and hip tiles. The full-metal solution consists of a single lead sheet, giving it an extended service life. Its high intrinsic weight renders the edges extremely resistant to wind uplift – flapping due to adhesive fatigue is thus excluded.

### Flexible fitting without the need for adhesive

Since no adhesive is required to fix bleiCOLOR Dry Ridge Vent Roll, it can be fitted in any weather and at any temperature. Once unrolled on the ridge, bleiCOLOR Dry Ridge Vent Roll only needs to be fixed to the apex using nails or tacks and then formed. The corrugated sheets are elastic at the expansion zones and can be formed individually. The perforation ensures reliable aeration in accordance with DIN 4108 (Part 3).

### Coated on both sides

The UV- and weather-resistant coating ensures a uniform, long-lasting finish that harmonises with the roof colour. The sheets are supplied with a two-colour coating so that they can be laid on either side.

### STANDARD DIMENSIONS

280 x 5,000 mm

320 x 5,000 mm

### Colour combinations

 **Brick red / brown**  
similar to RAL 8004/8019

 **Brick red / charcoal grey**  
imilar to RAL 8004/7021

Other colours are available on request.

### Aeration cross-section

as per DIN 4108 (Part 3)  
approx. 150 cm/metre laid,  
sufficient for a rafter length of 15 m
