

RENDEZVOUS BETWEEN FAÇADES

The oldest half-timbered house in Metzingen has been expanded by a modern extension that is completely clad in Venusblei lead – an exciting, but harmonious contrast.

The object

The half-timbered house was built in the 15th century. It was renovated in 2011 and converted to a fashion outlet store. Some of the sales area is located in the extension that was built during the renovation. This extension was provided with an unmistakable and elegant façade.

The product

Venusblei lead is a unique product made by Röhr + Stolberg: The innovative surface treatment provides the lead sheets with a particularly high quality appearance. It prevents the formation of white streaks, provides a strong colour shade and also displays the metallic colour play of lead: ideal for the aesthetic requirements of the extension.

The special features

The modern extension is completely clad in Venusblei lead. This also has functional advantages: The roof and façade are thus easy to maintain and extremely weather resistant. Ventilation and rain drainage are integrated almost invisibly.

The new commercial building is an eye catcher in Metzingen (Image 1) and forms a strong contrast to the neighbouring half-timbered house (2). It is completely clad in Venusblei lead (3 and 4).

The facts:

Architects:
Kepler Architekten, Münsingen

Execution:
2010 to 2011

Task:
Roof and façade cladding

Product:
Venusblei lead 2.5 mm

Object size:
14 tonnes lead covering 225 m² façades and 240 m² roof

Advantages of lead:
Unique appearance, robust and low maintenance
